Shubham Kumar

.Net Developer (4+ Year)

: Er.ShubhamBhagat@gmail.com

: 7319944888

: ErShubhamBhagat.github.io

Experienced .NET Developer with over 4+ years of expertise in designing and developing scalable web applications and backend batch jobs using ASP.NET Core, C#, Web API, and SQL Server. Proficient in building RESTful APIs, implementing automation solutions. Skilled in optimizing SQL performance and delivering cloud-native solutions on Microsoft Azure. Recognized for strong analytical capabilities, collaborative teamwork, and a commitment to continuous learning and applying industry best practices. Seeking to contribute to innovative software development initiatives that drive business impact and operational excellence.

I'm looking for a job where I can push myself beyond my comfort zone and deliver scalable solutions. Excels at learning new software tools and best practices.

PROJECTS

DG Automation - (*IT*-D&A - *Cognizant project)*

April 2022 - Current - (C#.NET, ASP .NET CORE, Web API, SQL, Agile Methodology)

The implementation of Data Governance allows for the real-time capture of data from online and offline sources. However, the current staffing model for Data Governance is unable to cope with the projected growth in data without automation. Therefore, automated data capture of real-time telemetry information is essential to overcome this limitation.

- Interact with stakeholders to determine the requirement and needs.
- Gather requirements and develop related software application features and programs. Design and creation of database objects.
- Developing APIs in .net and interacting with web application
- Unit testing and bug fixing
- Deployment the deliverables in the respective environments.
- Integrated WCF services for reliable communication across distributed systems.
- Collaborated with cross-functional teams to deliver features and ensure data integrity.

Data Governance – (CIO -Cognizant Project)

Data Profiling is a Data Quality (DQ) activity that examines data from a source and summarizes information about the data. It reviews source data and collects datatypes, recurring patterns, length, and statistics like min and max. It helps to identify critical attributes and check for completeness, uniqueness and conformity. This is an out-of-box, low-touch activity

I hereby declare that above mentioned information is correct and best to my knowledge and belief.

EXPERIENCE

Cognizant Technology -Kolkata

(November 2021-Current)

Application Developer

TECHNICAL SKILLS

Technologies I primarily work on:

C#.NET, .NET CORE, ASP.NET, Web API

Scripting Languages:

HTML, Java Script, Python CSS

Database:

SQL Server, MySQL, PostgreSQL Oracle

Version Control:

GIT, GitHub

Workflow Automation:

Microsoft Power Automation

API Testing:

Postman, Swagger

ITSM Tools:

ServiceNow

ETL & DataMigration :

Informatica

Cloud:

Microsoft Azure

AI Tools:

ChatGPT, Copilot, Gemini

STRENGTHS

- Able to handle clients.
- Capacity to adopt new technology.

Certification and Traning

AZ- 900 Azure Fundamental

AI – 900 AI fundamantal

LANGUAGES

English, Hindi
